SKILLS

GenAI & ML: LLM API integration (OpenAI, Gemini, ElevenLabs), prompt engineering, NLP, intent classification, AI agents, multi-model orchestration, AI-assisted development (Claude, ChatGPT, Gemini)

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks: Spring Boot, Node.js, Express.js, React.js, Next.js, Flask, Django

DB/Tools: PostgreSQL, Azure, AWS, MongoDB, Neo4j, Docker, GitHub Actions, REST APIs, Tableau

EXPERIENCE

Software Engineer, Aether Automation

April 2025 – Present

- Built a Python-based AI service integrating LLM APIs to surface aggregated insights and enable natural language queries over operational datasets, improving data accessibility and operational efficiency by 44%.
- Designed and shipped 10+ bi-directional integrations and custom workflows connecting CRMs with third-party SaaS platforms, eliminating 25+ hours of manual processing weekly per client.
- Built an AI service that surfaces aggregated insights and enables natural language queries over operational datasets, improving data accessibility and operational efficiency by 44% using Java, Python and REST APIs.
- Architected a healthcare pipeline moving sensitive records across distributed systems (Java, Python, MS SQL, Azure), reducing client manual data processing by 20+ hours weekly while meeting compliance requirements.
- Partner with clients post-deployment, implementing monitoring, logging, and alerting, troubleshooting production issues, and scoping expansion opportunities, bridging business needs and the engineering team.

Founder and Software Engineer, Study Spotr

August 2024 – Present

- Founded and scaled a location-based platform to 200+ concurrent users across Canada, securing \$10K in funding; owned technical strategy, AWS infrastructure, and data-driven product iteration based on user behavior metrics.
- Designed structured release experiments (A/B rollouts, cohort analysis) that reduced post-release defects 3x, using production feedback to prioritize roadmap and separate high-signal adoption drivers from noise
- Architected a modular Node.js backend with authentication and rate limiting, and a normalized PostgreSQL schema optimized for concurrent access across web and React Native clients.

Software Engineer, SFU Robot Soccer Club

February 2024 – Present

- Led full website rebuild designing secure, reliable RESTful API endpoints and NoSQL database schema using Next.js and Node.js, and mentored 2 junior developers on engineering best practices.

PROJECTS

ForeSee | *Next.js, TypeScript, Express, OpenAI API, Gemini API, ElevenLabs, PostgreSQL* March 2026

- Built a full-stack GenAI social finance platform with a Next.js/TypeScript frontend and Express.js backend, orchestrating OpenAI and ElevenLabs APIs with real-time Server-Sent Events for live text and audio streaming.
- Engineered modular API architecture supporting concurrent text and audio data streams with fault-tolerant sentence-level processing, integrating multiple services through well-defined interface contracts.
- Won ElevenLabs Award at Mountain Madness 2026 Hackathon (200+ hackers, 55+ projects).

Inbox Copilot | *Python, OpenAI API, GraphQL, Google API*

December 2025

- Built a Python-based AI agent that ingests Outlook email and uses the OpenAI LLM API for NLP-based intent classification and tagging, then automatically creates calendar events via Google Calendar and Outlook APIs.
- Designed the prompt layer and classification schema to handle noisy real-world email (deadlines, club announcements, recruiter outreach), iterating on prompt structure to improve tagging accuracy.

VOLUNTEER/MENTORING

Mentor, SFU Surge StormForge

January 2026 – April 2026

Mentor, UBC nwPlus cmd-f Hackathon

March 2026

EDUCATION

Simon Fraser University

September 2021 – April 2026

Bachelor of Science in Computer Science & Interactive Arts and Technology

Burnaby, BC
