Designer engineer who loves making the user experience the best it can be, and getting hands-on shipping it. I take products from user research to Figma prototypes and wireframes through to production code and design systems, and I'm happiest in the bridge between design and engineering teams.

Education

Sep 2021 – Apr 2026

Simon Fraser University – *BSc. Interactive Arts and Technology + Computer Science*

Dual focus combining software engineering with user experience design and research, studying how interactive systems shape what users feel, notice, and remember.

Related Course Work: Interaction Design Methods, Interface Design, HCI and Cognition, Information Design, Foundations of Game Design, Design Evaluation, Web and Mobile Design and Development

Projects & UX Case Studies

December 2025

Spotify Jam Feature Addition – *IAT 334 Interface Design*

- Conducted user research interviews with active Spotify Jam users to surface friction in collaborative listening; synthesized findings into a persona and problem statement identifying "silent disagreement" as the core unmet need.
- Designed an upvote/downvote queue feature with 50%-threshold contributor notifications and vote history transparency; delivered 4 interactive high-fidelity Figma prototypes covering various flows.
- Grounded each design decision in Nielsen heuristics and research insights, weighing alternatives like notification vs. auto-removal to preserve user agency.
- Connected the feature to business outcomes including session length, retention, and product differentiation. [Featured on SFU SIAT Fall 2025 Showcase.](#)

December 2025

Mastercard Fraud Analysis Dashboard – *IAT 333 Interaction Design Methods*

- Partnered with Mastercard's Fraud team to research analyst workflow friction across fraud rules, dashboards, and outdated data; validated design decisions through analyst workshops.
- Led the design ethnography phase, weekly stakeholder meetings to identify friction across static tables, untestable rules, and metrics disconnected from business outcomes.
- Contributed to 3 concept directions and a final dashboard system; ran usability testing sessions with Mastercard fraud analysts at the demo and translated findings into design iterations.

Experience

Apr 2025 – Present

Product Design and Software Engineer – *Aether Automation*

- Designed, prototyped and built an AI workflow tool, intelligent meeting summaries and natural-language CRM record management, used daily by client teams.
- Ran user feedback cycles to iterate on UX and improved operational efficiency by 44%.
- Owned end-to-end client delivery as the primary contact across product, engineering, and client stakeholders, translating user needs into designed and shipped features.
- Shipped EHR-to-CRM integration with HIPAA-compliant data handling, reducing patient onboarding time by 20+ hours weekly.

Aug 2024 – Present

Founder and Design Engineer – *Study Spotr*

- Founded and led a location-based consumer platform serving 200+ students across Canada; secured \$10K in funding while owning product strategy, user research, and design direction.
- Drove product design end-to-end from concept through web and React Native mobile launches, wireframes, interactive prototypes, usability iteration, and release coordination across a small team.
- Designed a normalized data model and testing pipeline that reduced post-release defects 3x.

Feb 2024 – Present

Director of Web Design and Development – *SFU Robot Soccer Club*

- Designed and shipped an internal tool for non-technical members; conducted needs interviews with club leadership, prototyped, and iterated on UX, reducing website update turnaround from days to minutes.
- Led the full website redesign and rebuild end-to-end: scoped requirements with club leadership, designed the database schema and REST API, and coordinated rollout across multiple teams.
- Mentored 2 junior developers and designers through code review and UX best practices.

Volunteering/Mentoring

May 2026

Mentor and Sponsor – *SFU Surge SparkJam (Design Hackathon)*

Jan 2026 – Apr 2026

Project Mentor – *SFU Surge StormForge*

- Mentored a team of 4 students (first-third year) to ideate, design, prototype and develop a fully functional mobile event registration app. Providing support and technical advice where needed.

Apr 2026

Hackathon Mentor – *UBC youCode*

Jan 2026

Hackathon Mentor – *UBC nωPlus cmd-f*
